

Your Journey to Having a Baby Starts with Being Safe!

Did You Know?

96% of online pharmacies are **illegal and unsafe.**

Counterfeit birth control, fertility medications and fertility test strips sold illegally online **may contain deadly poisons, too much, too little, or no active ingredients at all.**

Many **fertility medications need to be properly refrigerated**, and those sold online **often aren't stored or transported properly.**

The Do's and Don'ts

DO talk to your care team first. They can connect you to trusted specialty pharmacies.

DON'T be fooled by a maple leaf on a website! The medicine you think is coming from Canada is actually from a country where you wouldn't drink the water!

DON'T order medications from websites that:

- Fill orders without a valid prescription
- Have a physical street address outside the U.S.
- Lack a U.S.-licensed pharmacist on staff
- Send unsolicited emails
- Ship medications worldwide

DO look for **".pharmacy"** in website addresses, or verify that the pharmacy website is safe and legal before you buy by visiting **www.buysaferx.pharmacy**.
